

MOAMA DENTAL CLINIC

I, _____ understand that dental crowns are restorations that cover or cap teeth, restoring them to their natural size, shape, and colour. A crown not only helps with appearance, but can strengthen a tooth as well. A fixed (non-removable) bridge is designed to replace teeth that have been lost. Dental crowns and bridges are made of porcelain and may or may not have an inner layer of metal, while some are made of metal alone.

As with all procedures, there are certain potential problems associated with crowns and bridges. These include, but are not limited to:

1. The potential need for root canal therapy: The need for root canal therapy may become apparent during a crown preparation, or after a crown is made.
2. Dark lines at the gum line may appear on crowns or fixed bridges lined with metal. This is the metal edge of the crown. If the gum recedes after placement, this metal will show. (With PFM crowns) (N/A)
3. Food impaction may occur under a bridge- this may be an unavoidable condition in long-term. Meticulous home care is required. (With bridges) (N/A)

Crowns should usually be completed within one month. Failure to keep appointments (resulting in wearing the temporary crown for longer) can lead to gum disease, tooth loss, or a need to redo the crown at additional cost.

I further understand that I may be wearing temporary crowns for couple of weeks, which may come off and I must be careful to ensure that they are kept on until the permanent crowns are delivered.

I understand that rarely, it is not possible to match the colour of natural teeth exactly with artificial teeth.

I realise the final opportunity to make changes in my new crown (cap), or bridge, including shape, fit, size, and colour will be before permanent cementation. After permanently cementing crowns and/or bridges, only minimal changes can be made to the height of the crown.

I understand that like natural teeth, crowns and bridges need to be kept clean with proper oral hygiene and periodic professional cleanings, otherwise decay may develop underneath and/or around the margins of the restoration, leading to further dental treatment and possible replacement of the crown(s) and/or bridge.

All replacements in the future due to decay under the crown will be the my responsibility, however, any breakage, cracks and fractures in the crown or bridge will be replaced at no charge to the patient for a period of up to one year after the initial placement of the crown(s) or bridge.

In this office all of the doctors place additional efforts to insure the longevity and quality of crowns and bridges. We want you to be happy with the treatment you receive here enough that you refer your family and friends.
